

Outlook Setup 2002 / XP

How to setup Outlook to work with your new email account.

1.) After logging in, go to CONTROL PANEL and select MAIL. The icon should look like one of these.

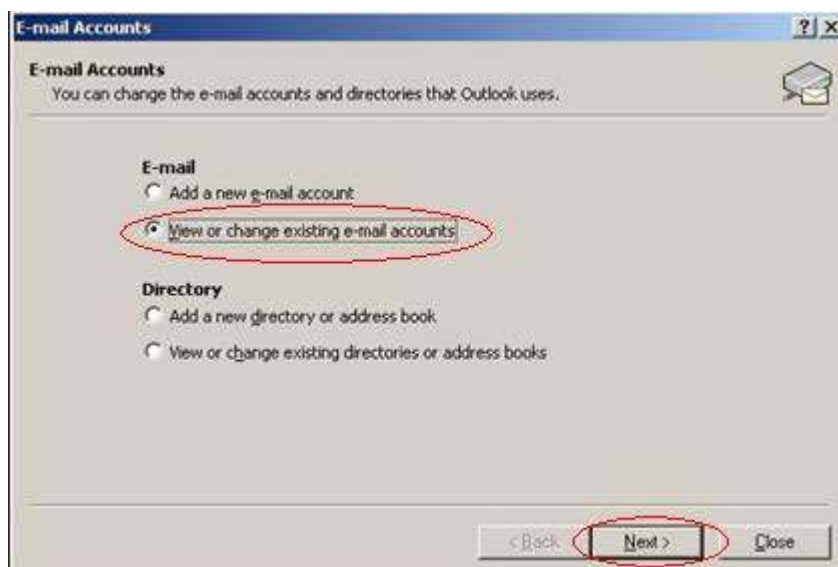

NOTE: FOR WINDOWS XP USERS, THE CONTROL PANEL MUST BE IN CLASSIC VIEW TO REVEAL THE MAIL ICON. IF NECESSARY SELECT CLASSIC VIEW FROM THE LEFT SIDE OF THE CONTROL PANEL WINDOW.

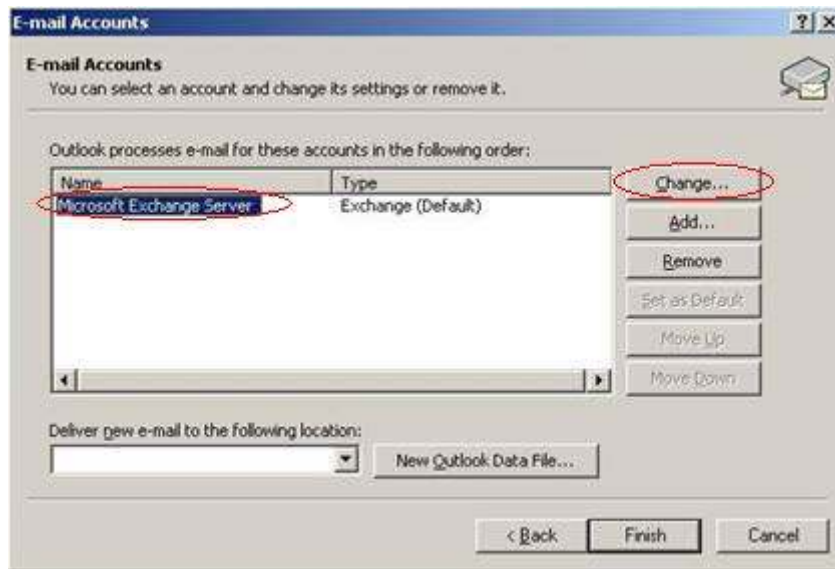

2.) On the first screen select E-MAIL ACCOUNTS.

3.) On the next screen select VIEW OR CHANGE EXISTING EMAIL ACCOUNTS and click NEXT.

4.) On the next screen select your mail profile and select CHANGE. You may have more than one.

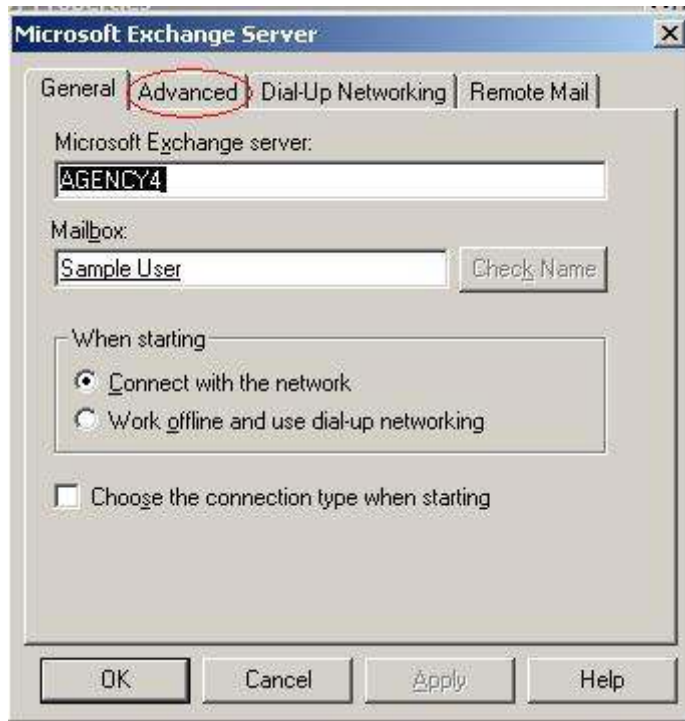

5.) On the next screen select MORE SETTINGS.

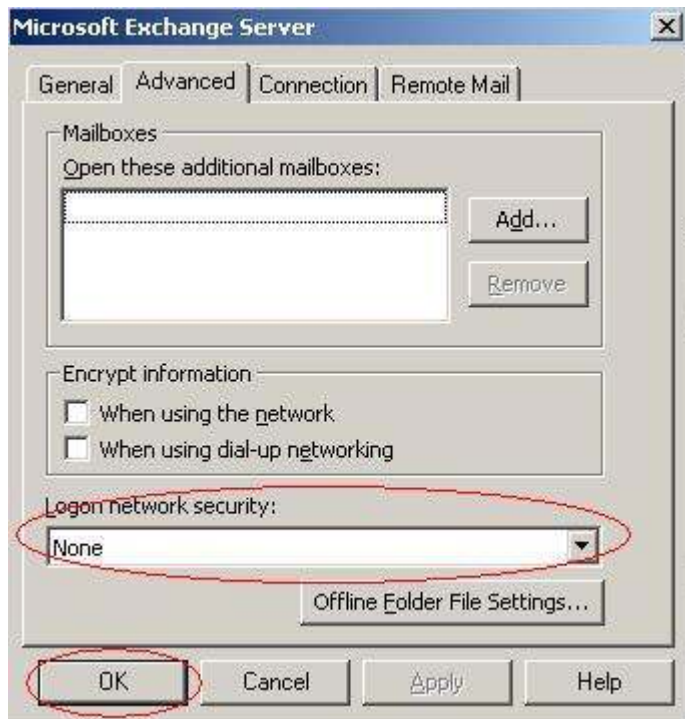

(continued on the next page)

6.) On the next screen select the ADVANCED tab.

7.) On the ADVANCED TAB screen, in the box labeled LOGON NETWORK SECURITY, select NONE and click OK.

8.) On the resulting screen select NEXT.

E-mail Accounts

Exchange Server Settings
You can enter the required information to connect to your Exchange server.

Type the name of your Microsoft Exchange Server computer. For information, see your system administrator.

Microsoft Exchange Server:

Type the name of the mailbox set up for you by your administrator. The mailbox name is usually your user name.

User Name:

9.) On the final screen select FINISH.

E-mail Accounts

You can select an account and change its settings or remove it.

Outlook processes e-mail for these accounts in the following order:

| Name | Type |
|---------------------------|--------------------|
| Microsoft Exchange Server | Exchange (Default) |

Deliver new e-mail to the following location:

(continued on the next page)

10.) After making these configuration changes you will need to log out and log back in. Your domain name can be found in the message you received with your new account info. The domain is the part to the left of the \ and your username is the part to the right of the \ . For example, a user named JUSER in the domain named MYDOMAIN would read *mydomain\juser* in the message. Blackberry users may be prompted to log into Outlook immediately after logging into the workstation, other users should be prompted to log into Outlook when they start Outlook. Depending on what Outlook version is being used the login box should look like one of these;

This screenshot shows a standard Windows 'Enter Password' dialog box. It has a title bar with a close button (X). The dialog contains three text input fields: 'User Name:', 'Domain Name:', and 'Password:'. Below the fields are two buttons: 'OK' and 'Cancel'.

This screenshot shows an alternative version of the 'Enter Password' dialog box. It includes fields for 'User Name:', 'Password:', and 'Domain Name:'. In addition to the 'OK' and 'Cancel' buttons, it features a 'Change Password...' button at the bottom right.

This screenshot shows a 'Connect to AGENCY4' dialog box. The title bar includes a help icon (?) and a close button (X). The dialog has a blue header area with a key icon and the text 'Connecting to AGENCY4'. Below this, there are input fields for 'User name:' (which includes a user icon) and 'Password:'. At the bottom are 'OK' and 'Cancel' buttons.

Please note that if the login box looks like the one on the right where there is no box to enter the domain name, the domain name and username must be entered into the username box separated by a backslash. For example, a user named JUSER in the domain named MYDOMAIN would enter MYDOMAIN\JUSER into the username box.
